BUILT HTML PAGE:

STEP 1:
OPEN THE TEXT EDITOR

In this step, we need to open the notepad or notepad++ to write an HTML code.

STEP 2:
In this step, we need to ty[e the HTML code in notepad or notepad++

<html><!--It is the opening tag of any html -->
<head>
<!
-The head tag is used to create a title of webpage, css syntax for a webpage and to write javascript code.-->
</head>
<body>
<!-
-The body tag is used to diplay the content on a webpage, whivh is specified between body tag. -->
</body>
</html>

STEP 3:
After completion of html code, we need to save that file in a fokder with .html extension.

STEP 4:
At last we need to execute or run th html file from the location where we have saved the file. Finally file will run on the default browser.
